Browser support list

A. Tested browser

We test every release with 2 majors browser in recent version, we recommend to pick a browser in the following list :

NOTE : For user that don't want to update browser too often and still having extended support with bug and security fix, we advise to look at [Firefox ESR](#) : we are supporting Firefox latest, latest-1, ESR-current and ESR-1.

B. Know bugs

There are known bugs **Internet Explorer** which might prevent the web interface to work. **Edge** browser may have some limitation (depthmap does not display for 3D sensor) for but it could be use to setup the sensor.

C. No support

Some browser may work but are mostly untested, this include notably : [Safari](#), [Opera](#), [Opera-mini](#), [Konqueror](#), [reKong](#), [Epiphanie](#), [Vivaldi](#), [Brave](#), [Qupzilla](#), [Midori](#), [Samsung-browser](#), [BlackBerry-browser](#), [Dolphin Browser](#), [UC browser](#), [Baidu browser](#), [Maxthon](#), [links](#), [elinks](#), [lynx](#), [w3m](#), [jumanji](#), [uzbl](#), [amaya](#), [sailfish-browser](#), [tizen-browser](#), [servo](#) ... and any other not on the chart.

This doesn't mean that we do something to prevent these browsers to work, but it is impossible to test it and support it all. The web interface may use some features unsupported by these browsers.
